set of use cases that describe user interactions that the software must provide.

This proforma is to be completed based on the
1. Problem statement document &
2. Information gathered during the 'Requirement Elicitation' meeting

Please complete the form carefully.

Background* ?

> Millions of students apply for internships and jobs every year. One of the critica

Project Overview* ?

> The project aims to analyze the relationship between students' economic back

Hardware Requirements* ?

> Nil

Software Requirements* ?

> Python through jupyter notebooak including python libraries like pandas ,numr

Constraints* ?

> Limited quality of fresher related data can restrict in depth analysis

Assumptions* ?

> The data is of sufficient quality and completeness for analysis

Risks* ?

> Inaccurate , incomplete or inconsistent data can lead to flawed analysis

Functional Requirements* ?

> The system must import and clean the dataset, handling missing values and en

Non-functional Requirements* ?

> The system must efficiently handle large datasets, ensuring scalability for futur

External Interface Requirements* ?

> The system should provide a user-friendly graphical user interface (GUI) for imr

Technology Used* ?

> Python for data analysis (Pandas, NumPy, Matplotlib/Seaborn) and Git/GitHub f
